

The Hygiene Co.

Over 25,000,000 kg of plastic wipes are used in Australia each year (that's over 30 times the weight of plastic straws used until recently). More than 95% of that plastic is from imported products.

Something had to change – with more than 20 million individual pieces of plastic waste created from wet wipes each day in Australia, we realised now is the time to make a product that makes a difference.

...and so, we created The Hygiene Co. Australia's only plastic-free wet wipe manufacturer.
